PUBLISHER: DOCUMENT TYPE: Journal LANGUAGE: English Influence of the preparation conditions on the morphology and electrochemical performance of nano-sized Cu-Sn alloy anodes Nano-sized Cu-Sn alloy powders were prepared by reductive precipitation method combining with the aging treatment in constant temperature water bath at 80 °C. The microstructure, morphol. and electrochem. property of synthesized Cu-Sn alloy powders were evaluated by X-ray diffraction (XRD), field-emission SEM (FE-SEM) and galvanostatical cycling tests. The results indicated that the aged sample had uniform phase
